Objective

Full Stack Developer with practical experience in building responsive and scalable web applications using React.js, Node.js, and modern technologies. Committed to writing clean, efficient code and developing robust system architectures. Enthusiastic about working in agile environments to create impactful solutions that support business success.

Education

BS in Computer Science August 2022–August 2026
FAST National University
Relevant Courses: Data Structures and Algorithms, Database Systems, Operating Systems, Software Engineering, Artificial Intelligence

Experience

Intern – Communication & Development Remote
Noble Navigators June 2025 – Present

- Collaborating with a dynamic team to improve communication, leadership, and content development skills through real-world projects.
- Supporting initiatives that drive innovative solutions and enhance organizational workflows.

Certifications

Oracle Certified Foundations Associate (Database) Oracle Education
30 August 2025

- Validated SQL, database design, and Oracle Cloud fundamentals.
- [Verify Credential](#) 

Virtual Internship – Consulting (via Forage) Virtual (Remote)
May 2025 – June 2025

- Completed consulting projects on strategy, data insights, and communication.

Skills

Programming Languages: C, C++, Java, Python, JavaScript, Assembly x86
Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, FastAPI, Bootstrap, Tailwind CSS
Database Management Systems: MySQL, MongoDB
Technologies & Tools: Git & GitHub, Linux (Bash/Shell), Machine Learning, Generative AI

Projects

Liners – Social Media Platform

- Built a full-stack social media platform with real-time chat, encrypted messaging, media uploads, and notifications.
- Designed scalable architecture using Node.js, Express.js, MongoDB, and React.js.

Car Rental Management System

- Developed a web-based rental system with vehicle booking, admin dashboard, and user authentication.
- Tools: React.js (frontend), Python (backend), MySQL (database)

Bank Management System – OOP Project

- Simulated banking operations using all four OOP pillars: abstraction, encapsulation, inheritance, and polymorphism.
- CLI-based account management with file handling in C++.

Hotel Management System – C Project

- Built a file-based hotel reservation and billing system in C with Text-to-Speech for interactivity.

Ice Cream Shop – OS Simulation

- Simulated a multi-threaded order system using POSIX threads, CPU scheduling, and synchronization.

Shopping Cart – DSA Project

- Built a console-based shopping cart in C++ using Linked List and Stack.
- Applied sorting algorithms for price-based item organization.
- Implemented dynamic data handling and admin control features.
